SUMMARY

I build automations that take repetitive work off small teams: lead routing, missed-call recovery, daily operations reporting, and calendar sync across booking channels. My background is business management and bookkeeping, so I design around what actually costs an owner money. I run my own brand's books and operations, which is where these problems came from.

CORE SKILLS

Automation	n8n, Zapier, GoHighLevel, webhooks, REST APIs, iCal / RFC 5545, Twilio, Gmail API, OpenAI API
Data & Reporting	PostgreSQL, Supabase, Google Sheets dashboards, Excel
Development	Next.js, React, JavaScript, TypeScript, Git
Business	Bookkeeping, P&L and margin analysis, inventory control, CRM management

SELECTED AUTOMATION WORK

Azure Sands · Channel Sync

n8n, PostgreSQL, iCal

Two workflows that stop a condotel selling the same room twice across Airbnb, Booking.com and its own site

- Inbound sync reads each channel's iCal feed every 30 minutes and reconciles blocked dates in a **single upsert-and-delete statement**, so a room is never observably free mid-sync.
- A failed fetch, a login page, or an empty body all count as no information and blocks are kept. Reading a 503 as an empty calendar is exactly what oversells a property.
- Serves a token-protected RFC 5545 feed back to the channels, with a source column stopping the sync from ever deleting a block a human entered.

Azure Sands · Daily Ops Digest

n8n, PostgreSQL, Gmail, OpenAI

6am cron that emails the owner one page: arrivals, departures, occupancy and the items that cost money if ignored

- Two parallel Postgres queries merged into one HTML email. **All arithmetic stays in a Code node** and the model writes only the brief, so it cannot invent an amount.
- Continues on error, so a dead API key drops one paragraph rather than killing the send. Dates are cast to text in SQL, since a Postgres date on a UTC server reports the wrong Manila day.

Northside HVAC · Missed Call Text-Back

n8n, Google Sheets, Twilio

Two coordinated workflows that text back a missed call and escalate to the owner only when nobody replied

- Escalation state machine over Google Sheets. After the five-minute wait the workflow **re-reads the row** instead of trusting data captured before the pause, because the reply workflow may have written to it in that window.
- Traced a silent failure to Sheets reading a leading + as a formula prefix, which quietly changed every stored number and escalated callers who had already replied.

Northside HVAC · Lead Routing

n8n, Google Sheets, Gmail

Scores inbound service requests 0 to 100 and alerts the shop only when a job is worth interrupting a technician

- All scoring sits in one Code node, so every routing decision stays auditable from the log.

EXPERIENCE

Founder & Operations Manager · Silencio Co

2024 – Present

- Run a streetwear brand end to end: sales, expenses, inventory, customer communication and daily operations.
- Built the Sheets accounting system: COGS, margins, receivables, payables, inventory value and break-even.
- Built and launched the storefront on Next.js, TypeScript and Supabase with secure customer accounts.

Freelance Web Developer · CC Source

May 25 – June 15, 2026

- Rebuilt an industrial component sourcing firm's Next.js and TypeScript frontend into a cleaner multilingual site, working inside the existing codebase without breaking live functionality.
- Delivered a responsive layout built to earn the trust of overseas B2B buyers across languages.

EDUCATION & CERTIFICATION

Central Philippine University

BS Business Management, major in Financial Management
Iloilo City · 2021 – 2024

STI College Kalibo

Senior High School · Accountancy, Business and Management
Kalibo, Aklan · Graduated 2020

Bookkeeping NC II · TESDA · Languages · English, Tagalog
